

Introducing...

featuring:

- Durability and security of laminated cards
- Superior color printing
- Convenience of PVC printing

The ultra-secure laminated ID card with the convenience of PVC printing

Ready to use straight out of your PVC printer.

With OmniLife™, printing a laminated PVC card has never been so easy. This product has the technology that combines the security and durability of a laminated ID card with the one-button convenience of PVC printing. The result is a long-lasting ID card that is far less likely to crack, chip, warp, or fade. And, with our custom factory printing, you'll get rich color matching and the added card protection of security marks such as holograms, color-shifting inks, photo clear foil, and reflective foil. It's all embedded in your cards under 10 mils of plastic, making your cards virtually impossible to duplicate or alter without easy detection.

How does it work? **1.** We supply you with a factory-printed and laminated ID card, complete with unique security marks embedded beneath the surface. **2.** You simply add the variable data (e.g. photo, name) with your PVC printer and it's ready to use. It's that easy.

Consider these benefits of the OmniLife ID card:

- Superior durability for heavy-use applications that require frequent reader swiping.
- Sharp, bright lithographic-quality printing for superb color matching of corporate colors or your organization's logo.
- No lamination requirement.
- Fast turnaround on most orders (less than a week) for quantities as small as 500 cards.
- Options on a combination of security processes and marks that are embedded in your card under 10 mils of plastic, making the OmniLife card virtually impossible to duplicate or alter.
- Greater protection against cracking, chipping, warping, or fading compared to traditional PVC cards.

Colorful. Durable. Secure.
