

# Introducing...

**OmniSMART™**  
*Stronger. Smarter.*

## featuring:

- Contactless MIFARE technology for smart card applications
- Durability and security of laminated smart cards
- Superior color printing
- Convenience of PVC printing

## The ultra-secure, laminated contactless smart card with the convenience of PVC printing

### Ready to use straight out of your PVC printer.

OmniSMART™ is an all-plastic PVC-printable ID card that includes a contactless MIFARE® chip for smart card applications.

The OmniSMART ID card features high-quality factory printing, bar codes\* and security features embedded under 10 mils of plastic, making it virtually impossible to duplicate or alter. OmniSMART may be personalized using a standard PVC card printer combining the quality and durability of a laminated card with the convenience of PVC printing. OmniSMART includes contactless MIFARE technology for flexible and secure integrated security management.

**How does it work?** **1.** We supply you with a factory-printed and laminated OmniSMART ID card, complete with unique security marks embedded beneath the surface. **2.** You simply add the variable data (e.g. photo, name) with your PVC printer and it's ready to use. It's that easy.

## Consider these benefits of the OmniSMART ID card:

- Sharp, bright lithographic-quality printing for superb color matching of corporate colors or your organization's logo.
- No lamination requirement.
- Fast turnaround on most orders (under 2 weeks from approval) for quantities as small as 500 cards.
- Options on a combination of security processes and marks that are embedded in your card under 10 mils of plastic, making the OmniSMART card virtually impossible to duplicate or alter.
- Greater protection against cracking, chipping, warping, or fading compared to traditional PVC cards.
- Can be slotted on any side.

\* Due to card thickness, mag stripe technology is not available with OmniSMART.
